actenum

What would you do in this role?

You are a senior Java/SaaS developer who has successfully delivered enterprise software solutions, both on premise and is SaaS environments. Your role will include enhancing and adding to Actenum software products currently deployed on premise by small to large organizations. You will also be architecting and implementing new secure and scalable cloud applications.

As a senior member of the development team you will be expected to mentor more junior team members. You will coordinate with the rest of the team, working on different layers of our development platform. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality product is important.

What would be expected of you in this role?

To be successful, you will need to fit into a small company environment, and be able to take on challenges that are not found in more structured organizations. You must also be a proactive and independent thinker, able to take ownership of tasks with little supervision. Your responsibilities will include:

- Enhancing and extending our current software products deployed on premises
- Architecting and implementing new secure and scalable cloud application as SaaS offering
- Mentoring Junior developers
- Improving tools for product implementation consultants who configure our software products for customers
- Helping to continuously improve the development process and infrastructure

What skills and experience do you need?

- At least 5 years experience in software development
- Experience in building complex software systems that have been successfully delivered to customers
- Experience working with product implementation and support teams
- Experience in building enterprise web applications that are installed on premise at customer sites
- Strong proficiency in Java based application development
- Knowledge of cloud concepts and cloud architecture
- Experience with cloud development, building containerized applications, CI/CS pipelines
- Experience with AWS or alternative cloud platforms

About Actenum Corporation

Actenum Corporation develops advanced software for scheduling upstream operations.

Our products create shareholder value for our customers by increasing operational efficiency, reducing cycle times, and improving collaboration within project teams. And we combine deep knowledge of optimization and upstream scheduling best practices to provide tangible improvements to drilling program productivity.

We offer a challenging and dynamic environment where you can bring your skills and experience to bear on important issues facing major oil & gas organizations. We put a premium on delivering innovative and quality solutions, while having fun doing it.

www.actenum.com
